D-Index Analysis ?

What is D-Index of a student ?

D-Index represent difficulty level of a student in an assessment. D-Index values ranges between 0 to 100; 100 is the highest value which represent student can solve any level of problems. 0 represent that student has no problem solving skills (OR assessment is not performed correctly if no question is attempt). Higher the value better it is for a student. Caveat: Efficacy of D-Index improves as the no. of participants increases in the test (Ideal for >30 participants)
